

Amendment to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) A packaging, the packaging holding for an article or a set of articles, the packaging including:

a plastic member with a protruding part, the protruding part allowing for disposing ~~disposal of~~ a first article or a first set of articles being held by the packaging,

a perforation in said plastic member, and

a foldable part of said plastic member, said foldable part ~~for~~ holding a second article in a fixed position relative to the first article or first set of articles being held by the packaging.

2. (previously presented) A packaging according to claim 1, wherein said foldable part includes a second protruding part, said second protruding part holding the second article in the fixed position relative to the first article.

3. (previously presented) A packaging according to claim 1, wherein said foldable part covers the second article, and part of the first article.

4. (previously presented) A packaging according to claim 2, wherein said second protruding part of the foldable part is located in the protruding part of the plastic member, while holding the second article in the fixed position relative to the first article.

5. (previously presented) A packaging according to claim 1, wherein the first article is a cover to a communication terminal and the second article is a keymat to said cover.

6. (currently amended) A method of holding a second article in a position relative to a first article in a packaging for a communication terminal, comprising:
placing said first article in a protruded part of ~~a packaging~~ the packaging;
placing said second article in a position relative to the first article; and
holding the second article in a fixed position relative to the first article by a foldable part of the packaging, parts of the second article being visible when in the fixed position relative to the first article.

7. (currently amended) A method for packing a first article or a first set of articles in a packaging for a communications terminal including:
placing the first article in a protruded part of a packaging,
locating a second article in a position relative to said first article, parts of said second article being visible when located in the position relative to the first article,
and

folding a foldable part of the packaging to hold said second article in a fixed position relative to said first article.

8. (original) A method according to claim 7, where said first article is a cover to a communication terminal and said second article is a keymat to said cover.
